SAFEGUARDS

We believe that to create a best-in-class safety program, all employees must commit to a core list of safeguards. The safeguards are designed to protect against the most common causes of severe injury. They are foundational to our safety culture. All employees should know and consistently commit to these standards.

Complete a job task safety assessment prior to each task.

Use proper lifting technique and ask for help when needed.

Work zone protection

Set up proper work zone protection before beginning work.

Appropriate PPE

Wear appropriate PPE for the task.

You have stop work authority

Stop the job when there are unaddressed hazards present. You have "stop work authority."

Special care for high-risk tasks

Use special care when performing "high-risk" tasks (working aloft, excavation, enclosed/confined space, energized hazards).
